EDUCATION

Redeemer's University <i>Bachelor of Science in Computer Science</i>	Ede, Osun State <i>Expected July 2027</i>
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Operating Systems, Computer Architecture, Software Engineering, Computer Networks, System Architecture.	

TECHNICAL SKILLS

Languages: Go, JavaScript, TypeScript, Python, C, SQL, Rust
Frameworks & Technologies: Express.js, Next.js, React, Gin, Axum, Node.js, REST APIs, Microservices, Tailwind CSS, WebSockets
Tools & Infrastructure: Docker, Kubernetes, Minikube, PostgreSQL, MongoDB, Redis, MySQL, Linux (Arch/Hyprrland), Git, GitHub, Render, Vercel, Railway

EXPERIENCE

Software Engineer Intern <i>Redeemer's Health Village (IT Department)</i>	Mar 2026 - Aug 2026 <i>Nigeria</i>
- Architected and deployed a full-stack Incident Reporting and Management Tracker using Go (Gin), PostgreSQL, Next.js, and Docker, incorporating Role-Based Access Control (RBAC), audit logs, and date-range filtering. - Designed and integrated a Hospital Death Reporting module within the incident system, building ACID-compliant PostgreSQL schemas and multi-step Next.js forms. - Optimized data retrieval speed by implementing PostgreSQL trigram indexes (pg_trgm) to enable fast fuzzy matching and global search capabilities across system records.	

PROJECTS

Enterprise Document Management System GitHub Repo <i>Node.js, Express, MongoDB, React, RBAC, Docker, Vercel, Render</i>	Apr 2026
- Engineered granular Role-Based Access Control (RBAC) to dynamically enforce secure data access boundaries and administrative controls. - Implemented high-performance, encrypted file-sharing features across the platform, deploying the frontend to Vercel and backend to Render. - Collaborated in a team environment to deliver comprehensive REST API documentation and modular backend architecture.	
E-Commerce Microservices Architecture GitHub Repo <i>Go, Node.js, Docker, PostgreSQL, Redis</i>	
- Architected decoupled microservices handling product catalog, order processing, and authentication using event-driven communication. - Containerized microservices with Docker Compose, configuring dynamic API gateway routing, service discovery, and centralized environment management.	
Sprout — CLI Project Scaffolder GitHub Repo <i>Go, CLI, System Automation</i>	Aug 2026
Engineered an efficient CLI scaffolding utility in Go to instantiate standardized multi-tier project structures dynamically with zero external runtime dependencies.	

LEADERSHIP & MENTORSHIP

Technical Mentor & Onboarding Lead <i>Redeemer's Health Village</i>	Sep 2026 - Present <i>Nigeria</i>
- Conducted hands-on technical onboarding sessions for incoming engineering interns, training them on version control workflows, repository management, and industry best practices using Git and GitHub. - Mentored junior peers on collaborative branching strategies, pull request etiquette, and merge conflict resolution to streamline team development workflows.
